The values above also include internal use. As we can see, the RIS web sites have had a total of 77091 hits during 2502 visits in April. Merely by judging hits, the site for RIS raw data downloads, <http://data.ris.ripe.net/>, is substantially more popular than the one, <http://www.ris.ripe.net/>, which hosts our web pages and queries. 389 MB of RIS raw data, distributed over 38 visits, was downloaded during an average day in April. RIS raw data seems to be popular within the community.

The list over URLs for <http://www.ris.ripe.net/> gives use a good indication of which queries that are used by site visitors. In April, Asinuse was our most popular query type with the other ones trailing far behind, probably partly due auditing activities by RIPE NCC Registration Services. It is interesting that the RIS Looking Glasses are second on the list. There are probably not many other single Looking Glasses that allow users to select disperse geographical locations, as is possible with ours. The presence of ASView as entries five and six is slightly misleading, probably many hits were generated during the development of this tool. The other list for <http://data.ris.ripe.net/> indicates clearly that there were no raw data files that received more attention than any other.

#### Comments:

-----

The most interesting observations are that the University of Saarbrücken, AT&T Research, Renesys and the Defence Telematic Organisation, who are responsible for all territorial communications used by the Dutch military, are by far the most active downloaders of raw data. It would be interesting to know the Dutch MoD's intentions for RIS data.
